A NEWER WORLD
and
A NEWER VISION

Dr. M. K. Vaidya

No 2 / 00

June 1983

AN INTRODUCTION

- ... Truth is stranger than fiction.
- ... Romance... is defined as "a tendency away from actuality."
- ... Books written on imaginary subjects attract raw minds for dreaming what is not. And madden them with ideas of romance and the unreal, often damaging the prospects of their precious lives given to them only once with all the fantastic and highly romantic reals.
- ... Ancient lores of India and modern advances of scientific world have been unravelling the secrets of life and living. They are more romantic far more realistic and true, and far more rapturous than the imaginary that mislead the dream-led satisfaction of the man.
- ... Ancient Rishis and modern scientists have recognised a power highly powerful, pervading everything existant in this world guiding and managing everything that exists and happens in this vast, vast, vast, Universe "smaller than the smallest and bigger than the biggest". The GREAT UNKNOWN or MAHA ANAJANA in one version, or the Electrons and Protons and the Etherial in another.
- ... The power ...Ominipotent, Omniscient Omnipresent the ALMIGHTY.

II

... *The power that exhibits the obvious capacity to create and float in air huge masses like our own earth, the Suns, the Stars, the Nebulae, and miriads of such other bodies. Rotate them, balance them, maintain their mutual relationships, sizes, shapes, movements. and miriads of their other functions with superb precision, timings etc., for millions, and millions, and millions, of years*

... *It is unfortunate that even whatever little is known about this power is confined to a mystery, never to be attempted to be known or understood by the most important COMMON MAN and restricted only to the Rishi or the Scientist of to-day. This has kept real happiness, the Real Romance of life and living, away from him, the most important of the creations*

... *Somehow, this door to the fantastic real, was opened to me ... the common man, by the Designer, while I was trying to serve the supreme creation of the Almighty so far known to me ... the MAN. I thought of presenting it to my kith and kin who seem to be groping in the dark trying to explore the elephant but so far no where near to it.*

... *Hence this exposition of collection of material given by the Rishis and scientists and presentation of my own dream based on truth and fantasy...*

A NEWER WORLD & A NEWER VISION

1. ... The only creation wherein various types and a variety of powers are gifted by Dame Nature is a HUMAN.

... That is why in this vast Universe of ours he has acquired a unique distinction.

... However, his advances or failures are totally dependent on how he uses these gifts.

... And that is why the most important need for him is to "know himself first".

= This knowledge about "Himself" is itself so vast and fantastic that efforts of millions of years may not suffice to complete it.

... But even if his efforts to discover the unfathomable limits of that knowledge make him aware of it.

... The A B C of the vastness of his ignorance and smallness of his present being might dawn on him.

x x x x x

2. ... It is, however, very unfortunate that all present day attempts drive towards closing the doors to this path of emancipation, happiness and bliss.

... And man is being thrust into the clutches of jealousies, competitions, hatred, temptations, mutual exploitations and destruction as a "natural need."

... It is only good luck that the scientist, the alchemist, and the philosopher have ignored these common world trends and have given their lives to discoveries and inventions to reduce the limits of this ignorance and show newer paths of scientific progress to the vast humanity.

o o o o

3. ... In this chain of thought we try to explore only one of such examples.

... Which may indicate a simpler way "to know oneself first" and better.

... It may give some idea of the unfathomable powers, endless knowledge, and greatness of the creations of the CREATOR of this World..... This Universe.

... And then one may find that there are many many more examples of such type which each human must try to search, find, and benefit from.

o o o o

4. ... Our forefathers had the knowledge of the existence of a force behind the creation of this Universe which they described as "smaller than the smallest and bigger than the biggest".

... Omnipotent, Omniscient, Omnipresent. All pervading.

... How they came to know about it or think out about it is a mystery to me.

... They certainly did not have the facilities of modern machines and equipments to explore and see the Infra and the Ultra.

... That may mean they must have had some other powers to see beyond, which we do not have.

... It is their marvellous achievement from every point of view.

x x x x

5. ... The modern man came to know of the "bigger than the biggest" more easily through the scientific channels.....Telescopes, mathematics, etc. etc.

... The existence and power of the "smallest" also was brought to him by a terrible, horrible, and devastating experiment..... at Hiroshima.

o o o o

6. ... For our purpose we will try to understand just a little about the Human Body.

... Human Body is made up of about 60,000,000,000,000 (60 trillion) CELLS.

... A CELL is the smallest living unit of any being in the world or the brick of the structure.

... These facts are now proved by the scientists, and made easy to verify.

- ... With the help of microscopes, computers, and various other equipments.
- ... Cells, have innumerable sizes, shapes, and functions in each organ of body.
- ... Up till now, the knowledge about the Cell was limited to microscope only.
- ... This instrument was capable of enlarging them up to 1,500 times.
- ... The "Electronic Microscope" has raised this power (the newest one to 10,00,000 times) to 1,00,000 times.
- ... And if photographed and projected, on the screen, it would be 10 times more.

o o o o

6. ... The study and experiments on the powers of the atom still continue.
- ... It is through this study and experiments that man has stepped beyond the ordinary microscope.
 - ... Utilising this knowledge of electrons and protons he has brought out an "Electronic Microscope"
 - ... This electronic or Ultra microscope has opened a new door to humanity to look into a new world which shows the other end of the fantastic creation.

o o o o

7. Atoms come together in different formations to create everything in this Universe ... animate as well as inanimate.

Millions, trillions, and the uncountables of such formations go to form the smallest and the biggest in stones, trees, animals, constelations, air, water, and what not and of course we the human beings.

o o o o

8. ... Each cell thus enlarged, could be compared to a pin point in actuality.

... Far far beyond our own power of visibility with our naked eye.

... A cell enlarged 1,500 times looks the size of a small grain under the microscope.

... and the biggest cell in human is said to measure about 1/2000 of an inch.

... Its structure at this size is like a thin walled grain with a central darker spot called nucleus, and fluid called protoplasm with some dots.

o o o o

9. ... What is seen under the electronic microscope in that pin point cell is the vision of a fantastic architecture crowded with millions of structures which could

never be imagined. It is the marvel of a creator's powers.

- ... What has come out after deep studies by the research scholars is further marvel which each of us must learn and understand as it brings a new vision of self realisation towards real peace and emancipation.

x x x x

10. ... Each of these cells could be compared to a huge city, ingeniously protected.

... A huge huge city. Its residents being in millions.

... There is generation of electricity on which every activity seems geared up.

.... There are chemical factories producing all the needs of the cell.

A huge variety of complex chemicals.

.... There are systems of communications and intercommunications.

... Every movement within is systematic, disciplined, and highly rationalised. There are systems of imports, of requirements, synthesis, distributions and disposals.

... There are machineries and mechanisms to face adversities from within and the environment.

- ... There are ingenious methods to face external attacks by enemies and means and methods of self preservation, and protection.
- ... There are superb facilities for records and processes for preservation of self and preservation of species so essential for culture and continuity.
- There are also facilities for improvements of powers from generation to generation and to maintain the existing most accurately. (DNA, RNA)
- ... And.... there is a strong, highly intelligent and highly efficient central administration to maintain and to perpetuate and to improve all these disciplines.
- Including the LIFE itself which is the essence of the fantastic creation.
- ... And all this in a tiny invisible space as big as *the tip of a needle*.
- ... Who could have imagined it ? Who could have made it ?

11. ... It is worth consideration and rumination :—

- ... A human body made up of such 60-trillion cities or kingdoms. The biggest of them as small as 1/2000 of an inch in size.
- and all these 60-trillion administrations working most most harmoniously under one highly disciplined

central administration and facing together a huge variety of environmental vagaries and enemies efficiently.

... For years and years... 50... 70... 100... and even 150 may be.

... That too for a modern humanity ignorant, careless, often self castigating by their variety of acts of commission and omissions, as we see.

... Still making them live those years.

... And for this, they all slog day and night many without even a moment's rest. Like the heart, the lungs, the brain, bowels, etc.

o o o

... As for the human, even the advanced one

... Ignorance is so very vast. He is comparatively totally ignorant.

... And very much careless and callous about his own precious possession.

... This man who hankers for the jewels, gold, precious stones, clocks, cars, clothes, houses, bungalows, wealth, competitions, and quarrels etc., and ignores his most precious life only once given to him.

... LET HIM COME TO KNOW

... That huge treasures of precious, unaccountable, unfathomable, gifts are filled in his own body.

... What is more... they are alive, living, and mean the very *himself* to him.

o o o o

12. ... There is, for example, that marvellous tiny pump called the HEART, which keeps on pumping without a stop for years and years at a stretch.

... 1,00,000 miles of a living pipeline through which it pumps blood, nutrition and innumerable life saving and life protecting substances to the smallest to the biggest of the cell-kingdoms even to the remotest corner.

... and 60-trillion of them.

... Takes away the waste products of activities of all these 60-trillions to be thrown out through the equally marvellous and efficient organs of excretion like the kidneys, lungs, bowels, liver, eyes, nose, skin, innumerable glands, and the like. ...

... The structure, the functions, the efficiency, the discipline, and the co-ordinated co-operation to keep our bodies going smooth is another wonder of administrative marvel which deserves careful consideration and study.

... Alert and active from birth to death.

... Watchful and precise in its administrative capacity over the 60-trillion kingdoms of the most complex and complicated variety and functions.

... The BRAIN...

- ... Receiving informations, analysing, assessing, and replying to equally complex variety of situations and messages at a fantastic rate and speed through its own 12,000 000 000 cells and over 10,00,000 departments continuously without any break. A real master of its own Universe.
- ... It is another wonder situated in our head box very well protected and cared for
- ... It tails into the spinal cord inside our backbone
- ... And this in turn serves as a substation to bring relief to the brain by taking care of less important of its own responsibilities filtering those which must be answered by it and forwarding those which must go to the brain, its high command.
- There is an efficient telephone exchange at the base of the brain.

Its work is to computerise and forward incoming messages to appropriate departments of the brain and similarly redirect those going out as orders

x x x x

13. ... One must bring this arrangement before ones eyes and mind as ones own wonderful life and gift, or possession, within oneself.

- ... The speed is calculated to be around the rate of 10,000 messages at a time.
- ... Imagine the alertness and efficiency, and vastness of the job.
- ... How else an administration of 60-trillion kingdoms of such a magnitude as so far described could survive and run smooth?
- ... How could we have lived as we do?
- ... The best creation in the universe, of the world power, the Omnipotent, the Omniscient, the Omnipresent?
- ... It is also worth comparing with our own administrative varieties, and isms which we will never, it looks, will be able to perfect. And which are unnecessary if we look within ourselves for the best one.

o o o o

- 14. ... The human body is a museum of innumerable such marvels of living matter.
- 15. ... It is everyone's duty to spend even the whole life in knowing them.
- ... In making the best use of as many of them as possible for better living.
- ... That way is the shortest cut to emancipation and bliss.

... That also seems the deep meaning of the advice of the seers.

... "Know thyself first."

... And it is our auspicious, holy, and bounden duty to ourselves to follow it.

o o o o

16. ... All along, man has been struggling and struggling.

... The struggle is for peace and happiness, prosperity and emancipation.

... For that he has developed large variety of schemes.

... Administrative "Isms", religious varieties, social clubs and institutions, groups and associations, friends and enemies, and a legion others.

... He has evolved the judiciary, and the law, games and competitions, educational systems and cultural ideologies, theologies and theosophies.

... There have been also quarrels and jealousies, competitions and exploitations, hatred and wars, mutual distructions and world wars.

... And so on and so forth. But without peace and the bliss expected.

o o o o

17. ... Man's struggle for happiness still continues.

... The goal seems far away.

... the other benefits are, however, there.

... several discoveries and inventions have come to light.

... But the benefits or even the awareness.

... have never reached the most important common man.

... And he continues to struggle for happiness

... which he has not yet found. But on the other hand seems further away.

... He tries to satisfy himself on the saying of the old

... That no one can get complete happiness in this world.

... And yet his struggle continues

... generation after generation.

... Internal struggle for his own peace. Class struggle for social peace, wars and world wars for peace to the world.

... That has become the order of the day.

— It is peace, peace, peace and nothing but peace.

... There is so much hankering for peace.

... So much is the need for peace.

... And for that peace ... quarrels, competitions, mutual exploitation, organisation, wars and world wars are considered "essential", ways and means.

18. ... Not only MAN is gifted with such a wonderful and powerful structure or body.

... He is also given equally wonderful and powerful and unique gift none else seems to have.

... The mind... ideation and speaking or its faculties.

o o o

19. ... He must make use of them both for ultimate peace.

... Of his own and of his kind : the Society.

... The humanity.

... And also the other creations, similarly wonderful.

... Animate or inanimate.

x x x x x

20. ... While thinking along those lines after this revelation

... While looking at the restless humans running in all directions in search of peace and happiness

... The common men and women

... I felt that they should have a look at themselves

- ... Through the vision displayed by the "Electronic Microscope".
- ... A vision which easily gives a proof of the tremendousness of the Creator.
- ... Omnipotente, Omnipresence, Omniscience, and their meanings
- ... Should be easily realised.
- ... No high philosophies, difficult theorisations, complicated mathematics.
- ... The obvious is so clear to understand, so easy to explain.
- ... It will also bring to light the smallness of the GREAT (?), the ignorant, the arrogance and egoism of his kind.
- ... They should find it easy to realise how small we all are before the Creator.
- ... If this brings true humility and understanding to his mind's eye.
- ... He may be able to partake of this new experience of mine.
- ... May be, he could also find this new and easy path towards emancipation.

21. ... Any power has the same faculties and paths.

... If used understandingly and judiciously

... It leads to peace, progress, happiness and ultimate bliss.

... And it becomes superfluous to look to the Other World for them.

... The Heaven will be found and enjoyed on this very earth.

o o o

... If the same power is misused or abused.

... It will lead to unhappiness, misery, destruction, and disaster.

... It can also bring Hell on this very earth, in this very life.

... Then too one has not to wait for death to go to Hell.

x o x o x o x

22. ... Our illustrious forefathers and ancestors seemed to know this well.

... So in their own way, they used to "worship" every power.

... Whether small or big.

... It could be the Sun, the tree, or even the poisonous snake.

... They used to name them the "Deva" or the gifted, the powerful.

... Each in its own faculties

... Helpful if properly harnessed, dangerous if misused.

... "Deva" is translated as equivalent to "GOD" in English.

... That looks misleading

... God is described as ONE

... While Devas were 33 crores (330 million)

24. ... And "worship" in their acts was not dead praise. with flowers, prayers.

... It meant recognition, utilisation, preservation, and imitation of those powers given to them by Dame Nature or creator,

... Through ingenious process of evolution of millions and millions of years.

... And.....

... the marvellous power given to him to make use of their powers.

... for his own utilisation and for emancipation through realisation of HIM

... for his own progress through study and imitation so that his genes

... Could acquire those powers through implimentation
in his own genetics.

... Generation after generation.

x x x x

24. ... That is how man has gathered many more powers
than the other beings

... Due to judicious use of his own abilities, intelligence
and wisdom

... He has thus created fantastic novelties with the help
of these acquisitions brought in himself through
collection from others and rearing them in himself.

... Knowingly or unknowingly.

25. ... He has mastered certain elements through ages of
strong desire

... Which is another gift for evolutionary progress

... He has gone deeper and deeper in various branches
of sciences

... And made progress which is fantastic in the history
of mankind

... He has stepped on the moon, advanced to Mars,
crossed the risks of space

... Shown his special talent for safety and controls on
air, light, sound and innumerable other factors.

... With the strong desire in him as his greatest power to do.

... He flies like birds in the skies, swims like fish in dangerous deep oceans, walks like animals ordinary and amphibian.

... And he is proud of his achievements.

... Perhaps due to this strong desire and actions in the direction.

... Genetic powers might even give him the wings and the fins etc. in millions of years of such effort, and the wish.

x x x x

26. ... And yet, he is nowhere near the ability to create even a bit of his own complex and complicated body.

... Far less the cell or any of the contents of the cell of which he is made and which he has merely learnt to see under the ultra microscope.

... But.....

o o o o

27. ... The Creator has given him another very fantastic power.

... And also the mind and the tools to utilise that power.

... With that power and those tools

- ... He can create the impossible
- ... Not just one cell or its million contents
- ... But the whole of that marvellous and superb creation
- ... Another himself ... the MAN ... of 60-trillion cells
- ... With all the faculties and even the LIFE in it.

x x x x x

28. ... Our forefathers used to worship "Shiva-linga"
- ... Meaning auspicious sex-combination.
 - ... Or a model of copulation.
 - ... We also follow the tradition.
 - ... But without knowledge of its deep meaning, and meaning of "Worship"
29. ... The common man, nay every man, must come to know this
- ... That Shiva-Linga is nothing but
 - ... Sex and Sex-power used for Shiva or good purpose, auspicious use.
 - ... An ingenious tool that gives the fantastic power to procreate.
 - ... A 60-trillion cell, living, human with all wonderful faculties to one

... Who is otherwise incapable of producing even a bit of it.

... He must know the sex in that light

... And not as a secret, obnoxious, inauspicious subject.

... Nor the way it is advocated by the modern sex-educationist

... giving it an anti-social air and a daring advocacy posing like a revolutionary.

o o o o

30. ... We find in the ancient architectural masterpieces.

... We find them even in the religious centres like the holy temples.

... Models and pictures of naked humans or even GODs.

... Models of even copulations or sex-acts

... The meaning of it ?

... The sex, sex organs, or use of sex-power

... Must be carrying a different meaning in those times.

... Not one of secrecy, but one of normalcy, and usualness.

... And of a holy purpose and act.

... Why and how it changed ?

... And what brought it to the modern status of obnoxiousness and secrecy

... seems difficult for one to understand.

o o o o

31. ... Looking to modern controversies, modern dresses, and fashions.

... Modern discussions about sex, sex education, YES and NO etc.

... Something seems to be getting misfired

... man seems to have entered the wrong alley

... He seems to be carrying himself away from the proper use of his most most valuable of all the faculties and weapons.

... Devinely bestowed upon him.

... And entered the downward path of the evolutionary progress.

o o o o

32. ... But there is a possibility

... If man sees the ultra microscopic world and knows the writings there

... Then the genes, the genetics, the heredity, the DNA,
and further details

... may catch his imagination.

... He might go deep into the real meaning of his
existence

... He may see himself in the light of the actual, inste-
ad of the imaginary and the romantic of the
literature or the ignorant.

... He may understand more easily

... And get convinced of the meaning and strength of
his real powers.

... and also the sex-power for creating one better gene-
ration after generation.

... better heart, better lungs better brain, better every-
thing, and

... Even wings and fins.

... The pride of possessing these rare 60-trillion
kingdoms.

o o o o

33. ... Thus goes the story

... Yashoda, the mother of Lord Krishna, and an incar-
nation of the CREATOR

... Was arranging for a worship or pooja.

- ... Among the offerings there were sweets of a special type for the occasion.
- ... While she was in and out, Lord Krishna came in and saw it all.
- And quietly finished all the sweets while she was away.
- The quantity was quite big.
- ... On return, she found all the sweets gone.
- ... She was astonished.
- ... He could not have eaten them all ? A small boy.
- ... Still she asked him. He asked the same question.
- ... Out of curiosity and fun she asked him to open his mouth and show.
- ... He opened his mouth ... and LOH ?
- ... What she saw was unimaginable.
- ... There inside was a vision that made her forget herself.
- ... Vishwaroopā Darshana.
- ... The vision of the Universe. The creation of the Master...
- ... Omnipotent, omniscient, omnipresent.

- ... It was not her son. It was not the little urchin. The mischief maker.
- ... It was a special favour by the Lord to the one he called his mother
- ... I feel a look through the Ultra Microscope could play the same game.
- ... It has played on me.
- 35. ... The Ego of superiority, intelligence, arrogance, misuse of superb powers
- ... Might vanish
- ... And open the paths of peace, happiness, and emancipation for the makers of society and humanity.
- ... The Common men
- The Need of the Hour
