Taluk Data Tables - Krishnarajanagara .....	164
Taluk Data Tables - Hunsur .....	166
Taluk Data Tables - Piriapatna .....	168
Taluk Data Tables - Mysore .....	171

## INTRODUCTION TO VOLUME 2

### PLEASE READ THIS IMPORTANT NOTE BEFORE REFERING TO THIS DOCUMENT

This is Volume 2 of the report of the geographical mapping carried out in 25 districts of Karnataka. The volume comprises the output tables of the study. For information on the purpose of the study, methodology, meaning of terms (such as Level 1 and 2, Key Informants), and a brief overview of high-risk activity in a district, refer to the Volume 1 of the report.

Volume 2 is divided into two parts – Urban and Rural mapping. Tables on urban mapping provide data at the district and town level. At the district level, information is provided town-wise and in towns, location-wise. The urban mapping section also carries maps depicting high-risk activity in each town. The maps are hand-drawn and not to scale, and are meant to give an idea of the geographical spread of high-risk activity within the town.

The tables for rural mapping present data at the taluk level.

In the case of dhabas, the data is presented town-wise though dhabas are located outside the town. Dhabas reported from a specific town are listed at the end of the section dealing with that particular town.

The following is an explanation of what the data in some tables imply.

- Table 1 of district section<sup>1</sup>

#### **Total number of Key Informants interviewed at Level 1 and 2, by town**

This table provides, level-wise and town-wise, the number of Key Informants interviewed. Since many Key Informants could have been interviewed at both levels, the totals of Level 1 and 2 may be greater than the total number of Key Informants. If the totals are less it implies that the level of information sought from some Key Informants was unavailable.

- Table 1 of district section<sup>2</sup>

#### **Total number of Key Informant interviews conducted at Level 1 and 2, by town**

This table provides level-wise and town-wise the number of Key Informant interviews conducted. Since many Key Informants could have been interviewed at both levels, the table does not refer to the number of people met.

- Table 6 of district section and the fifth table of each town section

#### **Estimates of full-time and part-time sex workers by high-risk activity type**

These tables give the estimates of female sex workers and eunuch sex workers who are reported to be full-time or part-time sex workers.

Since this data is sought from those who may not be primary informants, it is difficult to get accurate information on the primacy of sex work as an occupation of the reported sex workers.

The study conducts a minimum of five interviews to profile each spot. If all the Key Informants interviewed did not provide a consistent picture as to whether the sex workers at the spot were full-time or part-time, the information has been rejected and marked as 'not known'.

- Table 7 of district section and seventh table of each town section

#### **Number of spots within each location, with specific high-risk activity type**

The numbers in these tables refer to the number of spots in which risk is sought or taken. In many spots it may be sought and taken. This information was not available for all spots and has been marked as 'not available'.

<sup>1</sup> The data collection formats were slightly modified after 8 districts. Hence there is a difference in the way key informant numbers are reported. The data reported in this format is for Bellary, Koppal, Raichur, Bijapur, Bidar, Gulbarga, Dakshin Kannada and Hassan districts.  
<sup>2</sup> The data reported in this format is for all other districts except those mentioned in footnote 1.

- Table 8 of district section and eighth table of each town section

**Number of spots within each location with estimates of client volumes and high-risk activity type**

The numbers in these tables refer to the number of spots in which sex workers have high (greater than three per day), medium (one to three per day), or low (less than three per day) volume of clients. The columns titled NS in the tables refer to the number of spots in which the high-risk activity is reported, and hence could be less than the total of high, medium and low spots.

This happens because the information is sought from persons who may not be primary informants and may not be able to give accurate information on the client volumes of the reported sex workers.

- Table 9 of district section

**Places reported at Level 1, not profiled at Level 2**

The study has developed a methodology in which a systematic choice is made to conduct Level 2 interviews in the top 10 locations mentioned at Level 1. All locations were covered only when time permitted. In some towns/cities, not all Level 1 places have been profiled in Level 2. This table lists these places, along with the frequency of mention at Level 1 and the rough estimates that are sought at Level 1. In some cases the tables mentions reasons why the place has not been profiled.

- Table 10 of district section

**List of locations/spots with zero high-risk activity**

The table gives the spots which, when profiled at Level 2, turned out to have zero high-risk activity (could have been a spot earlier, but has no activity now; or inaccurate information given by informant).

- Fifteenth table of each town section<sup>1</sup>

**List of dhabas most frequently mentioned by Key Informants, by high-risk activity type**

The numbers refer to the frequency of mention of the particular dhaba by Key Informants.

- First table of each taluk section in the rural mapping part

**List of villages most frequently mentioned by Key Informants, by high-risk activity type**

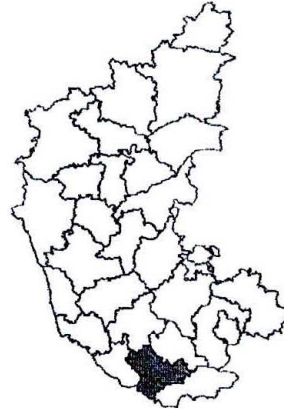

These tables give the proportion of Key Informants of the taluk mentioning a particular village. For instance, if 150 of 200 Key Informants interviewed at Level 1 mention atleast one village, and 50 (of these 150 Key Informants) mention one particular village, then the last column of the table will have 33%. Of these 50 persons, if all report female sex workers in the village, the FSW column will show 100%. If 5 informants report MSM, the MSM column will show 10%.

<sup>1</sup> These tables are not available for Bellary, Koppal, Raichur, Bijapur, Bidar, Gulbarga, Dakshin Kannada, Hassan, Kodagu and Udupi as this part was introduced half way through the research.
