AHRTAG

AHRTAG - The Appropriate Health Resources Technologies Action Group has a Resource Centre with information about Primary Health Care in developing countries, and is open to the public daily from 9.30 - 5.30 pm. Visitors are always welcome.

Reference Library

The enclosed classification scheme lists the primary health care subject areas on which the library has information.

Some of the topics we cover fully are mother & child health, health education, health planning & management, disability & rehabilitation, health personnel & training (e.g. traditional birth attendants), appropriate medical equipment and water & sanitation.

The Resource centre also collects information about:

- . Development organisations (local & international) working in different countries.
- . Health information relating to specific countries.
- . Health newsletters (both local & international).

Materials for Sale

- . AHRTAG publications - How To Look After a Refrigerator, How To Look After A Health Centre Store, How To Choose & Make A Cold Box, Low Cost Aids.
- . Bibliography on Training Materials for Maternal & Child Health including Family Planning produced by WHO.
- . Resource Lists - Community Health Education (including materials in French & Spanish), Diarrhoeal Diseases and a List of Free International Newsletters.
- . Limited selection of books e.g. World Federation of Public Health Associations Information for Action Series, Rakku's Story.

Free Materials

- . Health Newsletters sent regularly to developing countries - Dialogue on Diarrhoea, ARI (Acute Respiratory Infections) & Aids For Living.
- . Immunization - Information Sheets on Cold Chain and the appropriate technology.

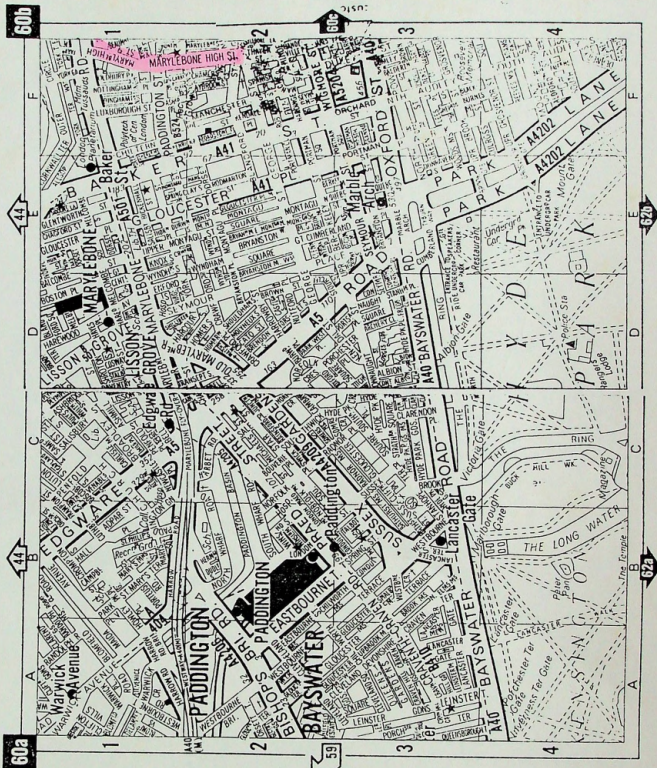

This Information Pack includes:

- . AHRTAG Annual Report
- . Example of each of the Health Newsletters
- . Classification Scheme used at the library.
- . Map of how to get to AHRTAG.

AHRTAG's address:

85 Marylebone High Street, London W1M 3DE.
Nearby tube stations are Baker Street & Bond Street.
The centre is situated above the ground floor shops.
For further information ring 01-486 4175 and ask for -
Mimi Khan, Suzanne Fustukian or Chris Whitehouse.

Address: 85 MARYLEBONE HEIGHT STREET - LONDON W1M 3DE
Tel: 486 4175.

Facilities are available for state registered nurses who wish to take a course of instruction in the nursing of tropical diseases. The course each year is of six months duration, commencing February/March and August/September. During the course, lectures and tutorials are given by medical staff and teaching is undertaken by nursing staff.

Institute of Child Health

● Tropical Child Health Unit
30 Guilford Street
London WC1N 1EH
Tel. 01 242 9789
Open: 9.00-5.00
Contact: Professor David Morley
Appointment would be greatly appreciated

Academic and research. Particular areas of expertise are mother and child health care, health care evaluation and teaching materials. Short courses under the general title of "Paediatric Priorities" are run each year at the beginning of July and September. A 15 month MSc course in maternal and child health is run each year from October. Attachment can also be arranged at other times. Also in the Tropical Child Health Unit is the office of the CHILD-to-child Programme which was established in the International Year of the Child to teach children of school age to concern themselves with the health of younger children. Lists of books, slides and other materials from TALC available.

Library with books and journals. Display material for reference. Four units for tape/slide viewing. Teaching and audio-visual material through TALC. Free material from CHILD-to-child Programme.

● Teaching Aids at Low Cost (TALC)

PO Box 49
St Albans
Herts. AL1 4AX
Tel: 0727 53869
Contact: Barbara Harvey

A non-profit making organization, TALC sells books and teaching aids for health workers at or below cost price. Its purpose is to help raise standards of health care, especially in developing countries. A major activity is producing and distributing sets of colour slides on various health topics. With the sets are scripts describing each slide, and usually including questions and answers. This is a teaching activity of the Institute of Child Health where all slide sets may be viewed. Accessories available include "Road to Health" weight charts, weight-for-height charts, flannelgraphs, anaemia recognition cards, measuring spoons, sugar and salt measures, and Cole's slide-rule calculators.

Middlesex TW11 9AA

Tel. 01 977 9144

Open: 9.00-5.00

Contact: Dr John Townsend (Medical and Health Care Consultant)

Inquiries by letter only

The Evangelical Alliance Relief Fund. In touch with doctors, nurses and other health personnel with experience in primary health care in approximately 30 developing countries. Particular experience in central Thailand, Nepal, Nigeria and Paraguay.

Audio-visual material. Display material. Free material.

UK Committee for UNICEF

46/48 Osnaburgh Street

London NW1 3PU

Tel. 01 388 7487

Open: 9.30-5.30

Contact: Jane Sluman (Resources Officer)

Inquiries welcome

UNICEF (UK Committee) is financed by voluntary contributions from the general public. It is one of 33 National Committees in the developed world responsible for information, fund-raising and development education. UNICEF is mainly concerned with assisting long-term government development programmes in 112 countries, particularly projects which relate to the basic needs of children including nutrition, preventive and curative health care, primary and vocational education and the provision of safe water supplies. UNICEF also supports the incorporation of the early detection and treatment of impairments into existing community-based health, child welfare and education services.

Produces material on the children of developing countries and has free and sale publications, posters, slide sets and films. Free catalogues available.

United Nations Information Centre

14-15 Stratford Place
London W1N 9AF
Tel. 01 629 6411

Open: 9.30-5.30

Contacts: Patricia Orr (Audio-visual section)/Patricia Farquhar (Library)
Inquiries welcome

An information centre for all inquiries relating to the work of the United Nations. The centre holds a large collection of WHO and other U.N. agency black and white photographs, colour slides and 16mm films which may be borrowed.

Library and reading room (open Monday, Wednesday and Thursday 10.00-1.00 and 2.00-5.00). Teaching material. Display material. Some free material. Some WHO material. Audio-visual material.

University of London Institute of Education Library

WE CAN PLAY AND MOVE

by Sophie Levitt

drawings by Shona Grant

WE CAN PLAY AND MOVE is an exciting new publication, based on the innovative work of physiotherapist Sophie Levitt, showing how exercises and movement for disabled children can be fun! Using play and everyday tasks, simple drawings describe ways in which children can play together whatever their physical abilities. Moving from easy to more difficult stages, WE CAN PLAY AND MOVE shows play activities lying, sitting and standing, as well as exercise for hands. Using lively pictures and short captions, it is an invaluable resource manual for anybody working with disabled children in the developing world.

We would be pleased to see you at the launch of WE CAN PLAY AND MOVE at 5.00pm, Monday 5 October at AHRTAG, 85 Marylebone High Street, London W1 (opposite Radio London). Look forward to meeting you there.

I would be pleased to attend the launch of WE CAN PLAY AND MOVE

I am unable to attend the launch, but would like to receive a copy for review

Anderson, OBE, FRCS, MA, MD, BChir, DO, Dr Marie-Thérèse Feuerstein, SRN, MEd, DipCD, PhD, Mr Dennis Frost, OBE, Mr Miles Hardie, MA, FHA, Dr John Macdonald, MEd, PhD, Mr Alan Morgan, BSc, FIEE, FBIM, Professor David Morley, MD, FRCP, DCh, Professor Aubrey Sheiham, PhD, BDS, Dr Gill Walt, BSc, PhD, Professor John K. G. Webb, OBE, MA, BM, FRCP, Dr Pamela Zinkin, MChB, DCh, FRCP
Registered Charity No. 274260 Company Registered No. 1322161 (England)

AHRTAG aims to promote approaches to health care which are effective but which are, at the same time, low-cost. These approaches aim to use the resources and skills which are locally available and to emphasise the prevention of disease rather than costly curative programmes.

AHRTAG's Disability Unit in particular aims to promote the production of aids and equipment for and by people with disabilities. These aids are made, as far as possible, from locally available materials. AHRTAG does this by:

disseminating information about such aids using designs and ideas developed in centres around the world;

providing technical assistance to enable workshops to set up production of aids or to enhance current designs and output.

Other publications from the Disability Unit include:

- * PERSONAL TRANSPORT FOR DISABLED PEOPLE (1984)
incorporating successful designs for local manufacture of wheeled aids.
Price £2.50 plus postage and packing.
- * SIMPLE AIDS FOR DAILY LIVING (1987)
a up-to-date manual of Don Caston's low-cost and appropriate aids for walking, sitting and movement.
Price £2.00 plus postage and packing.
- * LOW COST BELOW KNEE PROSTHESES (forthcoming)
simple designs for the production of low-cost below knee prostheses from locally available materials.

Other AHRTAG publications include:

- * HOW TO LOOK AFTER A HEALTH CENTRE STORE (1983)
helps those working in immunisation programmes to choose and make the most appropriate cold boxes for vaccine transport.
Price £3.00 plus postage and packing
- * HOW TO LOOK AFTER A REFRIGERATOR (1980)
gives step-by-step instructions for the care and maintenance of kerosene, gas and electric refrigerators.
Price £2.00 plus postage and packing

All these publications are available from Teaching Aids at Low Cost, PO Box 49, St Albans, Herts AL1 4AX, UK. Postage and packing is 50% of the cost of books. (30% within the UK, second class post)

- ONCHOCERCIASIS IN AFRICA/ John Anderson.
1978. 54 mins. 24 slides. Onchocerciasis
or 'River blindness' is a depopulating
disease common along some rivers in West
Africa and South America. Description of
the disease, how blindness arises, and how
it may be prevented.
For health workers overseas.
78-104 D
- As above
Also: TALC (q.v.)
- DEVELOPMENTAL SCREENING/ M.I. Griffiths.
1981. 80 mins. 48 slides. 1 set of notes
A method of developmental screening in
the first two years of life which is
relatively easy to apply.
For doctors and health workers overseas.
81-24 F
- As above
Also: TALC
- GROWTH/ W.A. Marshall. 1971. 63 mins.
24 slides. Characteristics of growth of
children; methods of measuring maturity
in various races; social effects; question
and answer tests.
For overseas doctors and health workers.
71-49 D
- As above
Also: TALC
- NEWBORN DEVELOPMENT/ Stephen Cohen.
1976. 27 mins. 24 slides. Series of
photographs from Zaria, Nigeria,
showing developmental features which
help to determine gestational age of baby.
76-82 D
- As above
Also: TALC
- CHOLERA/ H. Alistair Reid. 1981. 30 mins.
48 slides. Cholera still endemic in parts
of Africa and Asia; during last two
decades treatment has been revolutionised -
if correctly managed death should now be
rare.
81-5 F
- As above
- SEVERE MEASLES/ David Morley. 1976.
35 mins. 24 slides. Measles is a
severe disease in developing countries.
Causes, vaccination and complications.
76-141 D
- As above

- THE WORLD HEALTH ORGANISATION/
Morris Sinclair. 1974. 19 mins.
19 slides. What is WHO? How it
started; similarity to UN; aims and
achievements; what remains to be done;
malaria, small pox, polio, TB, water supply,
cancer, mental illness, drug abuse,
information research General audience.

CHILDREN/ Tape/slide set for doctors
and other health personnel. As above

CHARTING GROWTH IN SMALL CHILDREN/
Tape/slide set for health workers.

As above

COMMUNICATION IN HEALTH/
Ways in which a health worker may improve
communication.

COLD CHAIN - TARGET DISEASES: The six
with high mortality that immunization will
prevent.

COLD CHAIN: Keeping vaccines cool depends
on training workers to care for refriger-
ators and vaccine carriers.

DEVELOPMENT IN THE FIRST YEAR: Simple but
detailed account in Asian children.

DIARRHOEA MANAGEMENT: The practical
application of recent advances in the
management of killing disease.

DIARRHOEA: Aetiology, and management by
auxiliaries.

DEVELOPMENTAL SCREENING: Illustrates the
method of screening children for develop-
mental delay, devised in Birmingham, U.K.

FIBRE IN HUMAN DIET: An excellent and
amusing epidemiological account of the
importance of dietary fibre.

FOODS OF WEST AFRICA: Foods commonly given
to children, their preparation and nutriti-
onal value.

GOITRE AND CRETINISM: Epidemiology and
Aetiology.

GROWTH: Diagrams illustrating normal
growth, only suitable for senior medical
students.

GUINEA WORM: The clinical picture, natural
history, management and prevention of this
debilitating condition.

✓ **JAMKHED:** An innovative agricultural and health programme. As above

MANAGEMENT OF KWASHIORKOR: Common causes of early death and their prevention.

LEPROSY: A description of the disease with particular reference to childhood.

THE CLASSIFICATION OF LEPROSY: New understanding that immunology leads to improved classification.

MICROSCOPIC DIAGNOSIS OF TROPICAL DISEASES: Microscopic appearances of the agents of many tropical diseases.

● ✓ **MALNUTRITION:** As seen in Indian children but relevant to other areas.

MANAGEMENT IN CHILD HEALTH: Principles of management for health centre workers.

MENTAL HANDICAP: Common causes of mental retardation in the U.K.

SEVERE MEASLES: Suggestions as to how and why it is severe.

MALNUTRITION IN AN URBAN ENVIRONMENT: Some of the differences in an urban setting.

NEWBORN CARE: Simple low cost care in the first weeks of life.

● ✓ **NEWBORN DEVELOPMENT:** Differentiating premature and small for dates newborn.

NEWBORN KERNICTERUS: Prevention through identifying "at risk" children.

NEWBORN LUNG: Its physiology and pathology.

✓ **NUTRITION REHABILITATION:** As developed in India but relevant to other areas.

TWIN PREGNANCY AND LABOUR: Covers the common problems in the delivery of twins.

ONCHOCERCIASIS: River blindness, a depopulating disease along the rivers of West Africa and South America. The disease, how blindness arises and may be prevented.

As above

PRIMARY CHILD CARE: 10 sets of slides for use with King's book, "Primary Child Care" and his "Manager's Guide". Covers most common childhood conditions. (240 slides)

PROTEIN CALORIE DEFICIENCY: A description of the syndromes kwashiorkor and marasmus.

PATHOLOGY OF EXPERIMENTAL MALNUTRITION: Microscopic appearances in animal tissues.

PAEDIATRIC HAEMATOLOGY: Common haematological conditions found in tropical countries.

PHYSIOLOGY OF WOMEN: Conception and pregnancy in simple diagrams.

COMMON SKIN DISEASES OF CHILDREN IN THE TROPICS: Common skin conditions in the tropics and their management.

SKIN DISEASES IN TEMPERATE ZONES: Common conditions in the U.K.

SMALLPOX IN CHILDREN: Clinical description in African children and prevention.

NATURAL HISTORY OF CHILDHOOD TUBERCULOSIS: The characteristics of childhood T.B.

PATHOLOGY OF TUBERCULOSIS IN CHILDHOOD: Macroscopic and microscopic.

TECHNIQUES FOR EFFECTIVE READING AND LEARNING: For students of all levels to improve their learning techniques.

VALLEY TRUST: Description of simple and appropriate gardening for local food production.

XEROPHTHALMIA: Clinical appearance and prevention.

X-RAYS IN CHILDHOOD: Some diagnostic X-rays As above
for students to study.

POPULATION CONTROL/ 29 slides. 18 mins.
Professor M.C. MacNaughton of Glasgow
University presents his views on
population control, not only in this
country but in the world. He looks at
world population figures - but makes
the point that each country must be
looked at individually to see what the
problem is. He talks about various
problems facing those delivering birth
control in developed and developing
countries, and illustrates how people
are coping with some of these problems
in countries such as India, Africa and
Egypt as well as Britain.
For final year medical students, general
practitioners, nurses.

Charts/posters/flannelgraphsTitleProducer/distributor

FLANNELGRAPH OF THE GROWTH CHART.

The introduction of growth charts is not easy. Many health workers are unused to the concept involved in completing a growth curve. Even more have problems in fully understanding and interpreting a growth curve. Exercises with the flannelgraph may encourage more successful use of the charts.

The flannelgraph consists of a growth chart printed on cloth 91cm x 62cm, with 2 sets of symbols to cut out, and sheets describing the exercises in detail + overlay transparent sheets for evaluation of change in weight. Large transparency for use with overhead projector. Precut stencil for standard duplicator.

MAN IN THE HEAT. 19-- Col. sd. 8 mins. For: people living in hot countries. To: emphasise the importance of drinking adequate quantities of water and of rest pauses during heavy work.

As above

FILM SPOTS ON IMMUNIZATION. 1977. Col. sd. 16 mm . 5 mins. Switzerland. For: Lay audiences particularly mothers of young children. To: persuade them of the importance of vaccination. Five one minute films showing the dangers of German measles and its effect on the foetus if the disease is contracted during pregnancy,

As above

poliomyelitis preventable by oral vaccines, tetanus, a constant danger to children, multiple vaccination against diphtheria, polio, whooping cough, measles and tetanus and the harm done to a child's mental development by measles.

IMMUNIZE AND PROTECT YOUR CHILD. 1977. sd. 16 mm. 6 mins. Yugoslavia. For: mothers of young children To: encourage them to have their children vaccinated. Synopsis: a non-verbal animated cartoon to motivate mothers in the developing countries to vaccinate their children.

As above - BMA/BLAT
Film Library

PROTECT THEM NOW. 1977. Col. sd. 16 mm. 20 mins. Switzerland. For: general public. To: inform them of the need for immunization in the developing world. Shows that communicable diseases are one of the major causes of morbidity and mortality among pre-school children in the developing world. Explains the factors involved in organizing effective immunization measures including getting the potent vaccine safely and quickly to the areas where it is needed.

As above

THE LIFE CYCLE OF THE MALARIA PARASITE. 1951. Col. sd. 16mm. 23 mins. for: undergraduates and postgraduates. To: understand the life cycle of the parasites. Shows arrival in the human blood; asexual multiplication in the liver; release into the blood stream; fever; differentiation of the four species of human malaria. Passage of male and female forms back to the stomach of another mosquito where fertilisation occurs. Burrowing of the fertilised female into the mosquito system and hence via the salivary glands to the body of another victim.

As above

- FOCUS ON SIGHT. 1976. Col. sd. 16mm. 15 mins. For: health authorities and the general public. To: make them aware of the importance of preventive measures to combat blindness. Shows the major diseases that cause blindness: trachoma, xerophthalmia, cataract, and onchocerciasis, and how they can be prevented. A short sequence on accidents as a cause of blindness in the developed world is shown. As above
- OUT OF THE IVORY TOWER. Col. sd. 16mm. 10 mins. For: lay audiences. To: high-light the problem of bringing health care to the poorer and remote urban areas. Shows how Rajastham Medical College has given its students a deeper insight into the delivery of health care by sending them out, in some cases, on a house-to-house walk about to treat citizens. As above
- SPECIOSA. 1965. B/W sd. 16mm. 10 mins. Poland. For: Those interested in nurse training in Central Africa. To: Show something of the people and the medical problems of Burundi. The international team of teachers are shown in action. There are brief sequences of training and then the heroine, Speciosa 'graduates' and goes to a distant village where she gains the confidence of the inhabitants by successfully conducting a delivery. As above
- HEALTH BEGINS AT HOME. 1973. Col. s sd. 16mm. 10 mins. Russia. For: Children aged 6 to 11 years. To: make them aware of some simple points on disease prevention. The spirit of sickness concentrates his attention on a little house but with the help of medical services the family are able to expel him and he returns to his normal life of spreading disease and misery. As above

- PREVENTION IS BETTER THAN CURE. 1970. As above
 B/W. sd. 16mm 3 mins. Switzerland.
 For: general public. To: encourage
 them to practice the little theme. A
 series of six 30 second 'spots'.
- TOO LATE TOMORROW. 1978. Col. sd. 16mm As above
 30 mins. For: lay audiences. To:
 enable them to understand the work of
 the WHO. Shows the work of the WHO in
 its fight against endemic disease with
 the employment and training of local
 personnel.
- VISIT IN THE DESERT. 1965 Col. sd. As above
 16mm. 10 mins. Poland. For: general
 audiences. To: inform them of an
 aspect of WHO activities. Shows the
 activities of the WHO communicable eye
 diseases control project in Sudan.
 Cases of trachoma and conjunctivitis
 are treated and volunteers taught to
 apply antibiotic ointment.
- UNSEEN ENEMIES. 1959. Col. sd. 16mm. As above
 32.5 mins. For: General showing. To:
 make them aware of the dangers. Shows
 the widespread suffering due to
 endemic disease such as malaria,
 filiariasis and trachoma, and the
 measures used to eliminate them and
 their sources.
- RABIES. 1928. B/W silent 16mm 8 mins As above
 USA. For: medical audience.
 To: illustrate a fatal case of
 rabies. A clinical record of a fatal
 case in a child.
- SCIENCE AGAINST SHISTOSOMIASIS. 1967. Ciba Laboratories Ltd
 Col. sd. 16mm. 35 mins. Argentina. Horsham
 For: post graduates and pathologists. Sussex
 To: make the audience aware of the
 overall problem. Shows the
 geographical distribution of the three
 types of schistosome, the life cycle
 and typical snail habitat in Brazil.
 Preventive measures are reviewed and
 research work on schistosome mansoni and
 the development of drugs is shown.

There is a brief sequence showing clinical diagnosis and laboratory findings.

LEPROSY. 1974. Col. sd. 16mm. 35 mins. For: medical personnel and intelligent lay people. To: educate the audience in all aspects of leprosy. Traces the history of leprosy and the medical treatment of the disease.

British Leprosy Relief
Association
Fairfax House
Causton Road
Colchester,
Essex CO1 1PU

THE RABIES THREAT. 1974. Col. sd. 16mm. 15 mins. Australia. By: Australian Department of Health. For: general public. To: create an awareness of the necessity for observing quarantine regulations. Copyright: Australian Film Commission. Gives a brief outline of the history of rabies, its spread through Europe and the measures taken in Australia to avoid an outbreak. Review: an interesting film that would appeal to the general public. If widely shown it would certainly increase public knowledge of the disease of rabies and the risks involved in the importation of pet animals.

KIRATHIMO. 13 mins. A film concerned the Kirathimo village in Kenya, a rehabilitation project for women with children suffering from protein deficiency. In two weeks the women are taught the basics of nutrition, child care, hygiene, domestic science and family planning, whilst living in conditions similar to

As above

their home environment. The film shows how family planning can be integrated with other health, welfare and social services. Leaflets and slides also available. 1970

MOTHERS' CLUB OF SULHWA. 20 mins. The film describes how women in Korean villages come together to discuss matters of concern and to work out projects of benefit to the community as a whole. Family Planning education and clinical services are offered to women as an integral part of the Club's activities. Contraceptive services are provided by means of mobile clinics and family planning workers maintain close links with the club. 1971.

As above

Journey to Jerusalem. 11 mins. Because of the need for specialist eye treatment in the Arab lands - where in some areas 90% of all the children under five are infected with trachoma, the most blinding disease of all - a new ophthalmic hospital was opened in Jerusalem by the Order of St John. Every year more than 100,000 patients receive treatment at this hospital and more than 6000 surgical operations are performed by some of the world's most distinguished eye surgeons. The Hospital has an eye-bank and corneal grafting operations are performed. There is also a nursing school which trains the ophthalmic nurses and orderlies who will fight the battle against blindness in the towns, villages and countryside.

As above

THE FIELDWORKER IN INDONESIA. 25 mins. A day in the life of a fieldworker describing in detail the tasks she is called on to perform. Also available is a multi-media kit, MEETING THE PEOPLE, providing materials for family planning fieldwork training with emphasis on inter-personal communication skills. The kit, which also features the fieldworker, contains

a descriptive leaflet, guide to trainers, filmstrip, cassette tape, training monograph, methods booklet, materials source list, summary sheets and assessment form. 1976.

STRONG AND HEALTHY MOTHERS AND CHILDREN. 13 mins. Family Planning communications theme for Africa focusing on the link between family planning and the health and welfare of families. Underlines the benefits of child spacing and breast-feeding. 16-page booklet, poster and slide/cassette presentation also available. 1978

International Planned
Parenthood Federation
As above

FAMILY PLANNING COMMUNICATION: MASS MEDIA AND FIELDWORK. 10 mins. Focuses on the mass media campaign of the Ispahan family planning communications project of Iran. Stage 1 is to get the clinical services to the people, both urban and rural. Stage II involves the planning and execution of communications projects based on through research. Media include public address systems, radio, TV, newspapers, banners and posters. The message say's 'Two children are better, and contraception is safe'. Other methods of communication include the training of traditional midwives, health, agricultural leaders. Campaign reinforcement is also necessary to maintain motivation of acceptors. 1973.

As above

IMMUNISATION NOW. 20 mins. Explores both the history and present need for immunisation. Why we need to be immunised is stressed.

AWAY FROM DEPENDENCE / Ryder Cheshire
Mission Homes for the Disabled.

1974

As above.

30 mins. col. At a Leonard Cheshire Home in Manila, the Phillipines, the severely disabled people are as self-supporting as possible. The more able ones help the others. There is also a link with the local hospital. As well as showing this particular scheme, the film gives an insight into local customs of the Phillipines.

BLIND FARMERS OF SARAWAK. Royal Commonwealth Society for the Blind. 1965. col. 10 mins. How blind people in the East Indies who would otherwise be useless, are helped to work and enjoy themselves.

As above.

FAMILY PLANNING - FOLK MEDIA. 1973. col. 15 mins. For media reinforce existing ideologies, and therefore constitute a powerful means of communication. Oral communication has always preceded the written word. Examples are drawn from story, and include the singing story-teller, the puppet show, the travelling theatrical troupe and folk songs in general.

As above.

As above. Also:

✓ FAMILY PLANNING - LOW COST MEDIA. 1973. col. 15 mins. The changing of strongly-held beliefs and customs provides a challenge to communicators. Face-to-face communication is the most effective method. However, other methods discussed include posters, flannelgraphs, clipbooks, photographs etc. Low-cost methods of production are explained in detail. Emphasis is placed on adapting the method and the message to the local audience. Examples are drawn from Kenya and India

World-Wide Pictures Ltd
21 St Annes Court
London W1

✓ FIVE MINUTES TO MIDNIGHT : MALNUTRITION - THE HIDDEN KILLER. Col. 25 mins. The effects of malnutrition are deadly. Each year, it kills an estimated 15 million children under five. Those who live on are often mentally and physically crippled. This film examines the causes and effects of malnutrition and contrasts these with the values of our society. We also see some of the effects to remedy the situation: Mother Theresa, Dr. Aroles para medics, birth control schemes.

As above

✓ FREE INDEED. 1969. Shows the work of the Ludhiana Hospital in India, where there is a dedicated staff using some revolutionary techniques; such as applying artificial limbs immediately after amputation, so that patients are walking within hours of the operation. For general audiences, but might be of use to nursing students.

As above

AFRICAN VISION. ROYAL COMMONWEALTH SOCIETY FOR THE BLIND. 1980. 25 mins. col. This film about Malawi and Kenya shows a mobile eye clinic at

✓ FOOD FOR SIGHT. 1976. col. 10 mins. Produced by WHO in collaboration with the Royal Commonwealth Society for the Blind, at the government Erskine Hospital, Madurai, India. Deals with the story of two different families in the village of Svastipura. We see the subtle and complex reasons why some people want nine children, and others only three. Also as a videocassette. (Other programmes are about jobs, food, wealth and values).

As above

THE GREAT HEALTH ROBBERY, OXFAM. 1981. col. 21 mins. In the Third World, a huge range of western drugs is freely available on the open market. Many are totally inappropriate, some potentially dangerous. The Yemen provides a good example of this, and also of the invasion of baby-milks, the misuse of which often leads to diarrhoea and death from dehydration. The film explores both situations, and suggests that present commercial promotion leaves a lot to be desired.

As above

LEPROSY CAN BE CURED. col. 15 mins. The story of a man with the first stage of leprosy, and how he finds a cure before it is too late, unlike a friend who still relies on a native herbalist and becomes crippled. Told in a simple way, the film is designed to motivate leprosy patients in the poorer countries to accept modern cures, which often take a long time.

As above

THE FUTURE OF US ALL. 1974. col. 27 mins. To mark World Population Year and the 25th anniversary of the IPPF, this film describes how the IPPF functions through its network of family planning associations, and in collaboration with other international organisations. Shot in Venezuela, Thailand, Kenya and Britain, it brings out clearly how population pressures aggravate all the other problems of a country.

As above

✓ GIFT OF SIGHT. 1979. col. 15 mins. Royal Commonwealth Society for the Blind. Eye camps are set up in rural areas of India, where blindness can often be cured. Many people can be treated in one day, and though the camps themselves are improvised and somewhat primitive, the standard of medical care is very high. As above

INTO THE MOUTHS OF BABES. USA. col. 30 mins. Infant formula sales are rapidly increasing in third world countries and the companies concerned are advertising widely and pushing up their profits. But where money is short, water unclean, and people can't read instructions, these baby foods can be killers, causing enteritis, marasmus and malnutrition generally. This C.B.S. report contains interviews with mothers who are convinced that they help their babies by feeding them formulae instead of mothers milk. As above

KIRATHIHO : MODEL VILLAGE. 1971. col. 13 mins. A centre near Nairobi, Kenya, where African mothers are taught family planning, first and, simple hygiene and nutrition. Treatment is also given. This training takes place during a two week course to which the mother comes bringing her children with her. She is housed in a simple flat, and a housemother gives practical advice and help in domestic management. When the husbands visit, they are given training as well. An adaption to African rural life of the Peckham Health Centre concepts. As above

✓ A VIST TO VELLORE. col. 15 mins. In an Indian village a boy is injured falling from a tree he has been climbing. After trying other remedies he is taken to the hospital at Vellore and recovers. An interesting story for all ages. As above

✓ WHO CARES? THE STORY OF AN INDIAN GIRL. 1975. Col. 21 mins. Rathna is a 19-year-old girl from a poor Indian village who was paralysed for a long time. When she was cured, she was too weak to work in the fields and had no education. She was lucky to gain a place in a centre run on the Gandhian tradition where she could find a purpose in life by learning about how severely physically handicapped children overcome their own disadvantages. Also as a videocassette. As above

FAMILY PLANNING IN TAIWAN. 20 mins. A survey of efforts being made in Taiwan (formerly Formosa) to encourage family limitation mostly by means of the plastic loop. Shows the planning and social work required to acquaint people with the services provided. Suitable for general audiences. 1966. As above

- A GREAT PROBLEM. 10 mins. Indian colour cartoon about family planning. English commentary. As above
- MY BROTHER'S CHILDREN. 47 mins. Made for Nigerian audience. Presented in traditional style by one of Nigeria's most distinguished actor managers. The responsibilities of one brother who has planned his family, for another who has not. As above
- PLANNING YOUR FAMILY. 25 mins. The good family who have two and the poor family with about six and the father always in debt! 1968. As above
- ✓ THREE FAMILIES. 20 mins. India. A young married couple set up house and have as neighbours on one side a family with two children and on the other, one with six. The contrast between the two makes an amusing plea for birth control. 1967. As above
- ✓ YEARS OF PROMISE. 30 mins. India. The husband in a newlywed couple having too many children is persuaded by a puppet show at the mobile clinic to have a vasectomy. 1967. As above
- THE FAMILY OF MAN : BIRTH. B.B.C. 1974. B/W. 50 mins. In England it's usual to take it easy before giving birth, but in New Guinea and India the women work in the fields until the last minute. They do not appear to suffer so much in childbirth. Must we re-learn things which come naturally to them, or are they merely philosophical about accepting pain. As above
- THE FAMILY OF MAN. DEATH. B.B.C. 1974. B/W. 50 mins. In New Guinea the spirits of the dead haunt the living, and it is much the same in Botswana where the witch-doctor mediates. In Hong Kong graves must be as permanent as possible and many sacrifices have to be made, whereas in the Himalayas the bodies are burned, in accordance with Hindu customs, and the young children must watch. This is contrasted with our own antiseptic cremations, and we are asked whether if by sweeping the unpleasantness of death under the carpet we are not also denying ourselves a part of life. As above
- HOW MANY AFRICAN CHILDREN. Congo Film Production. 1975. col. 24 mins. African women are having more children because traditional taboos are breaking down, and they are not breast feeding their babies for so long. The film includes family discussions and statements by doctors about abortion and family planning. Suggests that new behaviour patterns, not necessarily those of the West must be developed to overcome this problem which is adversely affecting the women.

MARIAMA. 1976. col. 22 mins. The story of a small girl living in a fishing village in Sierra Leone who is found to have leprosy. She is sent away from her family to live in a village with other leprosy patients, and the film traces what happens to her during the course of treatment.

As above

PROTECT THEM NOW. UK Committee for UNICEF. col. 20 mins. Graphically shows the importance of immunization against communicative disease for the children of Ghana and all developing countries. The film explains the importance of primary health care in the colourful fishing villages of Ghana, which enlist the aid of traditional midwives and respected tribal healers in a comprehensive effort to protect the children.

✓ TO LIVE APART. 1976. The Cheshire Home at Raphael in South India houses mentally handicapped children and lepers. The lepers are cared for by an Indian doctor who explains the course the illness takes. He also shows us how important it is to treat each person as an individual, worthy of respect.

WATER : THE HAZARDOUS NECESSITY. USA. col. 21 mins. Every day, 25,000 people in developing countries die from using unsafe water, and until recently the problem has been largely ignored. For poor countries, providing clean water is seldom a high national priority - partly because the effects of unsafe water are not immediately visible, but also because there is no quick economic return. The film documents several of the water-borne tropical diseases plaguing Africa, and examines the economic and social conditions which allow them to flourish.

SEEDS OF HEALTH. Barefoot Films for the World Council of Churches and the WHO. 1976. col. 44 mins. Guatemala is a country where the majority of the population are desperately poor. The peasants have been exploited by rich landowners, but now there are schemes by which young Indians are trained to work in their own communities. There they teach nutrition and basic health care related to local needs and resources and not necessarily promoting the West's concept of health. They manage by co-operation to break out of the vicious circle, to buy land and plant crops such as potatoes to improve their diet. A very positive film to show that there are signs of hope, even in the poorest countries.

FOR EXPORT ONLY - PILLS. 1981. col. 55 mins. Examines the overseas marketing of pharmaceuticals that are banned or restricted for use in countries where they are produced. Drug firms often export these products with improper instructions and warnings. Thus the medications are sold or prescribed by Third World pharmacists or physicians who are unaware of dangerous side-effects including irreversible sex changes, blindness,

paralysis and even death for thousands of innocent victims.

As above

✓ **OUTSTRECHED HANDS.** 1983. col. 30 mins. A portrait of the Christian Hospital at Vellore, India, showing the many different activities which take place. The work of the CHAD and RUHSA projects in rural development is also shown.

✓ **SHANTALA - LOVING HANDS.** col. 23 mins. In India, mothers gently massage their babies, confirming the important physical link partially severed at birth. This film, produced by Dr. Frederick Leboyer shows one young mother massaging her four-month-old baby. We hear only Shantala humming, her baby breathing and gurgling and the sound of a flute. Attention is drawn to the massaging of arms, legs, hands, body and face.

As above

ZIMBABWE - THE STRUGGLE FOR HEALTH. Central Television 1983. col. 60 mins. The government of Zimbabwe has committed itself to improving the health of its people, but finds the task enormous. The medical profession there is not certain that its role extends beyond curing patients. But some medics are convinced that the doctor's real task is to promote health and not just to cure disease. This film looks at the health service system that Zimbabwe inherited upon independence, and the current debate about health services and training today.

HEALTH IN HOT CLIMATES. 20 mins. Changes in the body's mechanism with changes in temperature, process of acclimatisation, principles of maintaining health in hot climates

Services Kinema Corporation
Chalfont Grove, Narcot Lane,
Chalfont St. Peter
Gerards Cross, Bucks

✓ **CALCUTTA.** 97 mins. What malnutrition means in human terms. Illustrates vividly the importance of the right food for the individual and the world population

Harris-Films Ltd
Glenbuck Road
Surbiton, Surrey KT6 6BT
01-399 0022

THE ENEMY OF A PEOPLE. 20 mins. A detailed description of the causes and prevention of Kwashiork (malnutrition) based on SCF's work at the Nutrition Unit in Uganda. 1971.

The Save the Children Fund
157 Clapham Road
London SW9 0PT

THE NET. 25 mins. For: medical practitioners, ancillary workers, adult lay. Speedy location and treatment of leprosy patients. 1976

Leprosy Mission
50 Portland Place
London W1N 3DG

✓ **THE DEVIL'S GATEWAY, B.B.C. 'Everyman'.** 1981. col. 35 mins. Examines the taboos on menstruating women still prevalent in four major religions, orthodox Christianity, Islam, Hinduism and orthodox Judaism.

BBC Enterprises Ltd.,
Film Hire, Woodston House,
Oundle Road, Peterborough
PE2 9PZ
0733 52257/8

✓ **THE FAMILY OF MAN/B.B.C.** 1970. col. 7x50 mins. An anthropological examination of social rituals and

As above

phenomena in five very different communities around the world.

1. Married life.
2. Children.
3. Teenagers.
4. Weddings.
5. Birth.
6. Old age.
7. Death.

RICH MAN, POOR MAN/B.B.C. 1972. Each programme 50 mins. col. Five programmes arguing that the major processes of development are crippling poor countries rather than helping them. Include:

3. Food.
4. Medicine.

As above

THE MILLION MURDERING DEATH/B.B.C. 'Horizon'. 1982. col. 50 mins. Examines the problem of malaria in Sri Lanka, which continues to recur despite constant efforts to eliminate it.

As above

THE QUALYBUB PROJECT/B.B.C. 'Horizon'. 1981. col. 50 mins. A look at an Egyptian group searching for a cure for bilharzia. The group combines western medical practices with Muslim traditions of discipline and paternalism.

As above

✓ EAST OF BOMBAY/B.B.C. 'Horizon'. 1981. col. 50 mins. A documentary about village health workers, mainly illiterate women, in rural India.

As above

THE TSE TSE TRAP/B.B.C. 'Horizon'. 1978 col. 50 mins. Documentary about the research work being carried out in Africa on the tsetse fly. This major pest carries a parasite which can affect any domestic animal.

As above

A FAIR SHARE OF WHAT LITTLE WE HAVE/B.B.C. 'Horizon'. 1976. col. 45 mins. Documentary about how village health workers are being trained in Tanzania.

As above

SHOTS IN THE DARK/B.B.C. 'Horizon'. 1982. col. 50 mins. An examination of the use of Depo Provera in the Third World. This contraceptive is injected and prevents pregnancy for three months. However, it is banned in the U.S. because of the risk of cancer. This programme looks at its use in Thailand.

<u>Title</u>	<u>Producer/distributor</u>
✓ THE FOUNDATION OVERSEAS/JOINT VENTURE/JOURNEY TO INDIA. Leonard Cheshire Foundation. A compilation tape of three programmes. The first gives a description of the regions within which the Cheshire Homes are grouped throughout the world. A variety of homes. Leprosy in India, disabled children in Africa, and homes for mental retardation in New Guinea.	Concord Films Council Ltd 201 Felixstove Road Ipswich Suffolk IP3 9BJ 0473 76012
The second programme (18 mins. col) tells how Sue Ryder and Leonard Cheshire together started Raphael on a 30 acre site in the foothills of the Himalayas. It comprises a leper colony, a school for homeless children, mentally retarded children and the lepers' children. The lepers' self-help community. Definition of leprosy and the need for a protective environment to compensate for their lack of sensation in hands and feet.	As above
In the third (20 mins. B/W) Leonard Cheshire describes how he went over to India with hardly any money and no idea how to start, but with the faith that the need for homes there was great, and that something would turn up. He found it difficult to acquire land, and in fact used tents and hills. After setbacks he was able to start many establishments, and hand them over to be run and financed entirely by a local committee, as is always the case with the homes.	As above

ANTI-MALARIAL DRUGS AND THEIR ACTIONS
PARTS 1-2 (50 mins. & 37 mins.). 1972

University of London Audio-
Visual Centre
North Wing Studios
Senate House
Malet Street
London WC1E 7HY
01-636 8000

1 - International travel is increasing our exposure to exotic diseases, among them malaria. Eradication campaigns have only met with limited success, and new, better antimalarial drugs are still needed. The place of prophylaxis and treatment is discussed in relation to the parasite life cycle and pathology of malaria. The chemistry and historical development of modern antimalarials are reviewed.

As above

2 - The modes of action of chlorine, quinine and related drugs are discussed and compared. The actions and uses of inhibitors of folate biosynthetic pathways are considered, with special reference to the use of potential drug combinations and repository preparations. Recent investigations on the mechanisms of drug resistance in malaria parasites of man and experimental animals are outlined. The prevention and treatment of human infection with sensitive or resistant organisms are summarised.

SCHISTOSOMIASIS; THE POSSIBILITY OF CONTROL BY IMMUNIZATION/G.S. Nelson, London School of Hygiene and Tropical Medicine. 1974. 38 mins.
The programme is introduced with an illustrated amount of the life cycle, geographical distribution, clinical features and the methods used for the control of schistosomiasis. Nearly 200 million people are infected, and although effective drugs and chemicals are available for killing the parasites and small hosts, the disease is becoming more prevalent - mainly as a result of water resource development for agriculture and hydro-electricity. People acquire some degree of immunity to reinfection, and a strong resistance to reinfection can be produced in laboratory animals. Experiments with baboons and sheep are used to illustrate vaccination procedures using either irradiated homologous cercariae or nonpathogenic heterologous or hybrid parasites.
